During the publication process the authors inadvertently supplied the wrong version to the publisher and so the original published article does not reflect the changes made during the peer-review process. These changes are mainly on precision and clarity of text, and a few relative risks presented in Table 1 were corrected.

At the same time the authors wish to stress that the interpretation of the reviewed scientific evidence presented in the article and which led to the recommendation on alcohol consumption for the 4th edition of the European Code against Cancer has not changed between the two published versions. The conclusions from the evidence are: “If you drink alcohol of any type, limit your intake. Not drinking alcohol is better for cancer prevention.”

The correct and final version of the paper follows. The authors would like to apologize for any inconvenience caused.
